Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

	MCLG or	MCL, TT, or	Your	Ra	nge	Sample					
Contaminants	MRDLG	MRDL	Water	Low	<u>Hig</u>	h Date	Vio	<u>lation</u>	<u>Typical Source</u>		
Disinfectants & Disinfectant By-Products											
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants)											
Haloacetic Acids (HAA5) (ppb)	NA	60	2.3	NA		2009]	No	By-product of drinking water chlorination		
TTHMs [Total Trihalomethanes] (ppb)	NA	80	15	NA		2009]	No	By-product of drinking water disinfection		
Inorganic Contaminants											
Nitrate [measured as Nitrogen] (ppm)	10	10	0.53	NA		2010]	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits		
Chromium (ppb)	100	100	2.2	NA		2010]	No	Erosion of natural deposits		
Fluoride (ppm)	4	4	0.1	NA		2010]	NO	Erosion of natural deposits; Discharge from fertilizer		
Contaminants	MCLG	AL	Your <u>Water</u>	Sam Dat	•	# Samples Exceeding A		Exceed AL	ls <u>Typical Source</u>		
Inorganic Contaminants											
Copper - action level at consumer taps (ppm)	1.3	1.3	0.2	2010		0		No	Corrosion of household plumbing systems; Erosion of natural deposits		

Unit Descriptions						
Term	Definition					
ppm	ppm: parts per million, or milligrams per liter (mg/L)					
ppb	ppb: parts per billion, or micrograms per liter (μg/L)					
NA	NA: not applicable					
ND	ND: Not detected					
NR	NR: Monitoring not required, but recommended.					

Important Drinking Water Definitions						
Term	Definition					
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.					
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.					
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.					
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.					
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.					
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.					
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.					
MNR	MNR: Monitored Not Regulated					
MPL	MPL: State Assigned Maximum Permissible Level
